

OUR WEAR-RESISTANT PANEL

THE COMPETITION

ADVANTAGE - The surface is durable, hardened plastic. No contact is made with the paint or the legends. This results in a surface that will never wear through and legends that will never wear out.

PROBLEM - The painted surface is exposed and cannot withstand daily wear and tear. Wear can expose large white areas or raw light. This results in illegible legends and replacing or refurbishing the light plate every 5 years.

stacosystems™

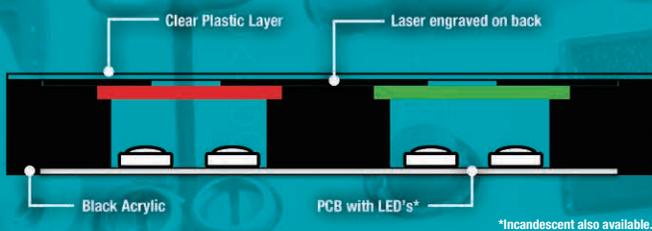

WEAR-RESISTANT ILLUMINATED PANEL
FOR ANY ENVIRONMENTAL CONDITIONS

US vs THEM

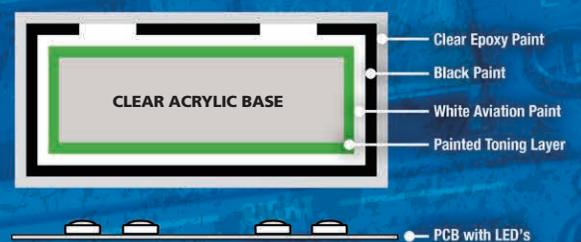

A simple comparison that proves your cockpit deserves better

CROSS-SECTION (DECONSTRUCTED)

ADVANTAGE - The surface of the illuminated panel has the same high brightness as Staco's trusted switches. The hidden annunciation capabilities of the panel have eliminated excess weight, space and panel depth by removing the need for additional components.

CROSS-SECTION (DECONSTRUCTED)

PROBLEM - Limited amount of light is able to penetrate through the multiple paint layers and Illuminated Sunlight Readable (SLR) text and graphics are not possible. SLR annunciation is implemented using discrete components that add cost and weight.

NEVER REPAIR. NEVER REPLACE.

The faceplate of every Illuminated Panel from Staco Systems is guaranteed to last the life of your airframe.

TRADITIONAL PANELS WEAR
